

Grading 'Answers Will Vary' Items

Score 0-100. These four questions are the whole lens.

1 Did they actually research it?

A looked-up number, not a guess. Screenshots, store names, or links count as proof.

2 Is the number plausible for San Antonio?

Rent, groceries, gas -- does it pass the local sniff test?

3 Did they show the work?

The path from research to answer is visible on the page.

4 Did they answer the question actually asked?

Right question, fully answered -- not a nearby question, half answered.

Two kinds of answers, two standards:

Calculation answers: graded exactly against the answer key. No lens needed.

'Answers will vary' items: graded with the four questions above.

Projects: the answer key's own guideline questions for that project apply too -- use them alongside this lens.
